```python
# Problem 1: Codility "CyclicRotation"
# Author: Hansen Zou
# Date: October 30, 2026

def solution(A, K):
    # Find number of elements in the array
    n = len(A)

    # Check if array is empty (nothing to rotate)
    if n == 0:
        return A

    # Make a list to hold result
    result = [0] * n

    # Iterate through array
    for i in range(n):
        # Each element moves K places to the right
        new_index = (i + K) % n

        # Put element in new position
        result[new_index] = A[i]

    # Return rotated array
    return result
```
